MARINE DIESEL-USA APPOINTS NEW DISTRIBUTOR

MarineDiesel-USA, based in Stillwater, Oklahoma, and serving the North and South American marine markets, has named **Jerry's Marine Service as the east coast distributor** of its 170 to 400 brake horsepower Optimizer 6500-based marine diesel engine line. The 6.5-litre, 8-cylinder blocks are also the foundation of the world renowned Humvee (High Mobility Multipurpose Wheeled Vehicle) military vehicles. From locations in Ft Lauderdale FL, Charleston SC, and Lakewood NJ, Jerry's Marine is able to offer outstanding service to clients from Maine to Key West. Their export department offers extended service to the rest of the America's and Caribbean.

MD USA currently has six engines models available including two 170 - 200 Hp naturally aspirated models and four supercharged-inter-cooled models ranging from 250 to 400 Hp. MarineDiesel-USA recently joined the likes of Yanmar, Steyr and Cummins to begin offering complete factory authorized packages coupled with the MerCruiser Bravo Diesel X-Series sterndrives.

- more -

Top performance is a hallmark of the 6500 based engine lineup. The custom developed supercharging system allows optimum performance at all levels of the rpm range, and its large displacement yields torque that smaller displacement, turbo-charged engines can't match.

The MarineDiesel product fits the engine mounts, exhaust systems and most wiring harnesses of typical 5.0-, 5.7-, 7.4- or 8.2-L gasoline V-8 engines. A center-rise exhaust system further simplifies conversions.

From day one, MarineDiesel's product development has focused on the repower industry, as well as OEM installations. The standardized "9-pin" electrical harness connection, engine and bell housing mountings, overall package dimensions and weight make is a great fit for most gas to diesel re-power conversion.

MarineDiesel's performance also makes it the center of attention. Combining the Optimizer 6500's overall engine displacement with MarineDiesel's 4-stage intercooled supercharging system and high-flow, D-port exhaust results in performance similar to that of larger, gasoline-powered engines. Maintaining one of the lowest fuel consumption ratings in the industry, this family of engines defines and delivers new levels of expectations to the industry.

Due to MarineDiesel's ease of installation they are quickly becoming a popular choice among power boaters around the world. With the addition of Jerry's Marine Service, MD USA is now able to make their products available to the masses with substantially shorter delivery times.
